

Threshold#

<https://pytorch.org/docs/stable/generated/torch.nn.Threshold.html#torch.nn.T>

Description:

Thresholds each element of the input Tensor. Threshold is defined as:

threshold (float) – The value to threshold at
value (float) – The value to replace with
inplace (bool) – can optionally do the operation in-place.

Default: False

Function Signature

```
class torch.nn.Threshold(threshold, value, inplace=False)  
[source]#
```

Parameters

Shape:

```
extra_repr()[source]#
```

Return type

Returns:

Tensor

Code Examples

```
>>> m = nn.Threshold(0, 0.5)
>>> input = torch.arange(-3, 3)
>>> output = m(input)
```

Detailed Documentation

Documentation

Thresholds each element of the input Tensor.

Threshold is defined as:

threshold (float) – The value to threshold at

value (float) – The value to replace with

inplace (bool) – can optionally do the operation in-place. Default: False

Input: $(*)^{(*)} (*)$, where $*^{**}$ means any number of dimensions.

Output: $(*)^{(*)} (*)$, same shape as the input.

Return the extra representation of the module.

Runs the forward pass.

Thresholds each element of the input Tensor.

Threshold is defined as:

threshold (float) – The value to threshold at

threshold (float) – The value to threshold at

value (float) – The value to replace with

value (float) – The value to replace with

inplace (bool) – can optionally do the operation in-place. Default: False

inplace (bool) – can optionally do the operation in-place. Default: False

Input: $(*)^{(*)}(*)$, where $*^{**}$ means any number of dimensions.

Input: $(*)^{(*)}(*)$, where $*^{**}$ means any number of dimensions.

Output: $(*)^{(*)}(*)$, same shape as the input.

Output: $(*)^{(*)}(*)$, same shape as the input.

Return the extra representation of the module.

Runs the forward pass.
