

torch.nn.functional.dropout#

<https://pytorch.org/docs/stable/generated/torch.nn.functional.dropout.html>

Description:

During training, randomly zeroes some elements of the input tensor with probability p . Uses samples from a Bernoulli distribution. See Dropout for details. p (float) – probability of an element to be zeroed. Default: 0.5
training (bool) – apply dropout if is True. Default: True

Function Signature

```
torch.nn.functional.dropout(input, p=0.5, training=True,  
inplace=False)[source]#
```

Parameters

Return type

Returns:

Tensor

Detailed Documentation

Documentation

During training, randomly zeroes some elements of the input tensor with probability p .

Uses samples from a Bernoulli distribution.

See Dropout for details.

p (float) – probability of an element to be zeroed. Default: 0.5

training (bool) – apply dropout if is True. Default: True

inplace (bool) – If set to True, will do this operation in-place. Default: False

During training, randomly zeroes some elements of the input tensor with probability p .

Uses samples from a Bernoulli distribution.

See Dropout for details.

p (float) – probability of an element to be zeroed. Default: 0.5

p (float) – probability of an element to be zeroed. Default: 0.5

training (bool) – apply dropout if is True. Default: True

training (bool) – apply dropout if is True. Default: True

inplace (bool) – If set to True, will do this operation in-place. Default: False

`inplace` (bool) – If set to True, will do this operation in-place. Default: False
