

torch.nn.functional.glu#

<https://pytorch.org/docs/stable/generated/torch.nn.functional.glu.html>

Description:

The gated linear unit. Computes: where input is split in half along dim to form a and b, σ is the sigmoid function and $\otimes$ is the element-wise product between matrices. See Language Modeling with Gated Convolutional Networks. input (Tensor) – input tensor dim (int) – dimension on which to split the input. Default: -1

Function Signature

```
torch.nn.functional.glu(input, dim=-1) → Tensor[source]#
```

Parameters

Return type

Returns:

Tensor

Detailed Documentation

Documentation

The gated linear unit. Computes:

where input is split in half along dim to form a and b, σ is the sigmoid function and $\otimes$ is the element-wise product between matrices.

See Language Modeling with Gated Convolutional Networks.

input (Tensor) – input tensor

dim (int) – dimension on which to split the input. Default: -1

The gated linear unit. Computes:

where input is split in half along dim to form a and b, σ is the sigmoid function and $\otimes$ is the element-wise product between matrices.

See Language Modeling with Gated Convolutional Networks.

input (Tensor) – input tensor

input (Tensor) – input tensor

dim (int) – dimension on which to split the input. Default: -1

dim (int) – dimension on which to split the input. Default: -1
