

torch.nn.functional.l1_loss#

https://pytorch.org/docs/stable/generated/torch.nn.functional.l1_loss.html

Description:

Compute the L1 loss, with optional weighting. Function that takes the mean element-wise absolute value difference. See L1Loss for details.
input (Tensor) – Predicted values. target (Tensor) – Ground truth values.

Function Signature

```
torch.nn.functional.l1_loss(input, target,  
size_average=None, reduce=None, reduction='mean',  
weight=None)[source]#
```

Parameters

Returns

Return type

Returns:

Tensor

Detailed Documentation

Documentation

Compute the L1 loss, with optional weighting.

Function that takes the mean element-wise absolute value difference.

See `L1Loss` for details.

`input` (Tensor) – Predicted values.

`target` (Tensor) – Ground truth values.

`size_average` (bool, optional) – Deprecated (see reduction).

`reduce` (bool, optional) – Deprecated (see reduction).

`reduction` (str, optional) – Specifies the reduction to apply to the output: ‘none’ | ‘mean’ | ‘sum’. ‘mean’: the mean of the output is taken. ‘sum’: the output will be summed. ‘none’: no reduction will be applied. Default: ‘mean’.

`weight` (Tensor, optional) – Weights for each sample. Default: None.

L1 loss (optionally weighted).
