

torch.nn.functional.local_response_norm

https://pytorch.org/docs/stable/generated/torch.nn.functional.local_response_norm.html

Description:

Apply local response normalization over an input signal. The input signal is composed of several input planes, where channels occupy the second dimension. Normalization is applied across channels. See `LocalResponseNorm` for details.

Function Signature

```
torch.nn.functional.local_response_norm(input, size,  
alpha=0.0001, beta=0.75, k=1.0)[source]#
```

Return type

Returns:

Tensor

Detailed Documentation

Documentation

Apply local response normalization over an input signal.

The input signal is composed of several input planes, where channels occupy the second dimension. Normalization is applied across channels.

See `LocalResponseNorm` for details.

Apply local response normalization over an input signal.

The input signal is composed of several input planes, where channels occupy the second dimension. Normalization is applied across channels.

See `LocalResponseNorm` for details.
