

torch.nn.functional.multi_margin_loss#

https://pytorch.org/docs/stable/generated/torch.nn.functional.multi_margin_loss.html

Description:

Compute the multi margin loss, with optional weighting. See MultiMarginLoss for details. input (Tensor) – Predicted values. target (Tensor) – Ground truth values. p (int, optional) – Has a default value of 1. 1 and 2 are the only supported values.

Function Signature

```
torch.nn.functional.multi_margin_loss(input, target, p=1,
margin=1.0, weight=None, size_average=None, reduce=None,
reduction='mean')[source]#
```

Parameters

Returns

Return type

Returns:

Tensor

Detailed Documentation

Documentation

Compute the multi margin loss, with optional weighting.

See `MultiMarginLoss` for details.

`input` (Tensor) – Predicted values.

`target` (Tensor) – Ground truth values.

`p` (int, optional) – Has a default value of 1. 1 and 2 are the only supported values.

`margin` (float, optional) – Margin for multi margin loss. Has a default value of 1.

`weight` (Tensor, optional) – Weights for each sample. Default: None.

`size_average` (bool, optional) – Deprecated (see reduction).

`reduce` (bool, optional) – Deprecated (see reduction).

`reduction` (str, optional) – Specifies the reduction to apply to the output: ‘none’ | ‘mean’ | ‘sum’. ‘mean’: the mean of the output is taken. ‘sum’: the output will be summed. ‘none’: no reduction will be applied. Default: ‘mean’.

Multi margin loss (optionally weighted).
