

Mish#

[https://pytorch.org/docs/stable/generated/torch.nn.modules.activation.Mish.h](https://pytorch.org/docs/stable/generated/torch.nn.modules.activation.Mish.html)

Description:

Applies the Mish function, element-wise. Mish: A Self Regularized Non-Monotonic Neural Activation Function. See Mish: A Self Regularized Non-Monotonic Neural Activation Function Input: $(*)^{(*)}(*)$, where $*^{**}$ means any number of dimensions.

Function Signature

```
class torch.nn.modules.activation.Mish(inplace=False)
[source]#
```

Shape:

```
extra_repr()[source]#
```

Return type

```
forward(input)[source]#
```

Returns:

Tensor

Code Examples

```
>>> m = nn.Mish()  
>>> input = torch.randn(2)  
>>> output = m(input)
```

Notes & Warnings

NOTE See [Mish: A Self Regularized Non-Monotonic Neural Activation Function](#)

Detailed Documentation

Documentation

Applies the Mish function, element-wise.

Mish: A Self Regularized Non-Monotonic Neural Activation Function.

See [Mish: A Self Regularized Non-Monotonic Neural Activation Function](#)

Input: $(*)^{(*)}(*)$, where $*^{**}$ means any number of dimensions.

Output: $(*)^{(*)}(*)$, same shape as the input.

Return the extra representation of the module.

Runs the forward pass.

Applies the Mish function, element-wise.

Mish: A Self Regularized Non-Monotonic Neural Activation Function.

See Mish: A Self Regularized Non-Monotonic Neural Activation Function

Input: $(*)^{(*)}(*)$, where $*^{**}$ means any number of dimensions.

Input: $(*)^{(*)}(*)$, where $*^{**}$ means any number of dimensions.

Output: $(*)^{(*)}(*)$, same shape as the input.

Output: $(*)^{(*)}(*)$, same shape as the input.

Return the extra representation of the module.

Runs the forward pass.
