

Identity#

[https://pytorch.org/docs/stable/generated/torch.nn.modules.linear.Identity.h](https://pytorch.org/docs/stable/generated/torch.nn.modules.linear.Identity.html)

Description:

A placeholder identity operator that is argument-insensitive. args (Any) – any argument (unused) kwargs (Any) – any keyword argument (unused)
Input: $(*)^{(*)}(*)$, where $*^{*}$ means any number of dimensions. Output: $(*)^{(*)}(*)$, same shape as the input.

Function Signature

```
class torch.nn.modules.linear.Identity(*args, **kwargs)  
[source]#
```

Parameters

Shape:

```
forward(input)[source]#
```

Return type

Returns:

Tensor

Code Examples

```
>>> m = nn.Identity(54, unused_argument1=0.1,
unused_argument2=False)
>>> input = torch.randn(128, 20)
>>> output = m(input)
>>> print(output.size())
torch.Size([128, 20])
```

Detailed Documentation

Documentation

A placeholder identity operator that is argument-insensitive.

args (Any) – any argument (unused)

kwargs (Any) – any keyword argument (unused)

Input: $(*)^{(*)}(*)$, where $*^{**}$ means any number of dimensions.

Output: $(*)^{(*)}(*)$, same shape as the input.

Runs the forward pass.

A placeholder identity operator that is argument-insensitive.

args (Any) – any argument (unused)

args (Any) – any argument (unused)

kwargs (Any) – any keyword argument (unused)

kwargs (Any) – any keyword argument (unused)

Input: $(*)^{(*)}(*)$, where $*^{**}$ means any number of dimensions.

Input: $(*)^{(*)}(*)$, where $*^{**}$ means any number of dimensions.

Output: $(*)^{(*)}(*)$, same shape as the input.

Output: $(*)^{(*)}(*)$, same shape as the input.

Runs the forward pass.
