

torch.nn.modules.module.register_module

https://pytorch.org/docs/stable/generated/torch.nn.modules.module.register_m

Description:

Register a buffer registration hook common to all modules. This adds global state to the nn.Module module. The hook will be called every time `register_buffer()` is invoked. It should have the following signature: The hook can modify the input or return a single modified value in the hook.

Function Signature

```
torch.nn.modules.module.register_module_buffer_registration_hook(hook)[source]#
```

Returns

Return type

Returns:

`torch.utils.hooks.RemovableHandle`

Code Examples

```
hook(module, name, buffer) -> None or new buffer
```

Notes & Warnings

WARNING

warning This adds global state to the nn.Module module

Detailed Documentation

Documentation

Register a buffer registration hook common to all modules.

This adds global state to the `nn.Module` module

The hook will be called every time `register_buffer()` is invoked. It should have the following signature:

The hook can modify the input or return a single modified value in the hook.

a handle that can be used to remove the added hook by calling `handle.remove()`

`torch.utils.hooks.RemovableHandle`

Register a buffer registration hook common to all modules.

This adds global state to the `nn.Module` module

The hook will be called every time `register_buffer()` is invoked. It should have the following signature:

The hook can modify the input or return a single modified value in the hook.

a handle that can be used to remove the added hook by calling `handle.remove()`

`torch.utils.hooks.RemovableHandle`
