

torch.nn.modules.module.register_module_full_backward_pre_hook

https://pytorch.org/docs/stable/generated/torch.nn.modules.module.register_module_full_backward_pre_hook.html

Description:

Register a backward pre-hook common to all the modules. This adds global state to the nn.module module and it is only intended for debugging/profiling purposes. Hooks registered using this function behave in the same way as those registered by `torch.nn.Module.register_full_backward_pre_hook()`. Refer to its documentation for more details. Hooks registered using this function will be called before hooks registered using `torch.nn.Module.register_full_backward_pre_hook()`.

Function Signature

```
torch.nn.modules.module.register_module_full_backward_pre_hook(hook)[source]#
```

Returns

Return type

Returns:

`torch.utils.hooks.RemovableHandle`

Notes & Warnings

WARNING

warning This adds global state to the `nn.module` module and it is only intended for debugging/profiling purposes.

Detailed Documentation

Documentation

Register a backward pre-hook common to all the modules.

This adds global state to the `nn.module` module and it is only intended for debugging/profiling purposes.

Hooks registered using this function behave in the same way as those registered by `torch.nn.Module.register_full_backward_pre_hook()`. Refer to its documentation for more details.

Hooks registered using this function will be called before hooks registered using `torch.nn.Module.register_full_backward_pre_hook()`.

a handle that can be used to remove the added hook by calling `handle.remove()`

`torch.utils.hooks.RemovableHandle`
