

torch.nn.utils.convert_parameters.vector

https://pytorch.org/docs/stable/generated/torch.nn.utils.convert_parameters.

Description:

Copy slices of a vector into an iterable of parameters. `vec` (Tensor) – a single vector representing the parameters of a model. `parameters` (Iterable[Tensor]) – an iterable of Tensors that are the parameters of a model.

Function Signature

```
torch.nn.utils.convert_parameters.vector_to_parameters(vec,  
parameters)[source]#
```

Parameters

Detailed Documentation

Documentation

Copy slices of a vector into an iterable of parameters.

`vec (Tensor)` – a single vector representing the parameters of a model.

`parameters (Iterable[Tensor])` – an iterable of Tensors that are the parameters of a model.

Copy slices of a vector into an iterable of parameters.

`vec (Tensor)` – a single vector representing the parameters of a model.

`vec (Tensor)` – a single vector representing the parameters of a model.

`parameters (Iterable[Tensor])` – an iterable of Tensors that are the parameters of a model.

`parameters (Iterable[Tensor])` – an iterable of Tensors that are the parameters of a model.
