

torch.nn.utils.fuse_linear_bn_weights#

https://pytorch.org/docs/stable/generated/torch.nn.utils.fuse_linear_bn_weights.html

Description:

Fuse linear module parameters and BatchNorm module parameters into new linear module parameters. `linear_w` (`torch.Tensor`) – Linear weight. `linear_b` (`Optional[torch.Tensor]`) – Linear bias. `bn_rm` (`torch.Tensor`) – BatchNorm running mean. `bn_rv` (`torch.Tensor`) – BatchNorm running variance.

Function Signature

```
torch.nn.utils.fuse_linear_bn_weights(linear_w, linear_b,  
bn_rm, bn_rv, bn_eps, bn_w, bn_b)[source]#
```

Parameters

Returns

Return type

Returns:

Tuple[torch.nn.Parameter, torch.nn.Parameter]

Detailed Documentation

Documentation

Fuse linear module parameters and BatchNorm module parameters into new linear module parameters.

linear_w (torch.Tensor) – Linear weight.

linear_b (Optional[torch.Tensor]) – Linear bias.

bn_rm (torch.Tensor) – BatchNorm running mean.

bn_rv (torch.Tensor) – BatchNorm running variance.

bn_eps (float) – BatchNorm epsilon.

bn_w (torch.Tensor) – BatchNorm weight.

bn_b (torch.Tensor) – BatchNorm bias.

Fused linear weight and bias.

Tuple[torch.nn.Parameter, torch.nn.Parameter]
