

torch.nn.utils.fusion.fuse_conv_bn_weights

https://pytorch.org/docs/stable/generated/torch.nn.utils.fusion.fuse_conv_bn_weights.html

Description:

Fuse convolutional module parameters and BatchNorm module parameters into new convolutional module parameters. conv_w (torch.Tensor) – Convolutional weight. conv_b (Optional[torch.Tensor]) – Convolutional bias. bn_rm (torch.Tensor) – BatchNorm running mean. bn_rv (torch.Tensor) – BatchNorm running variance.

Function Signature

```
torch.nn.utils.fusion.fuse_conv_bn_weights(conv_w, conv_b,
bn_rm, bn_rv, bn_eps, bn_w, bn_b, transpose=False)[source]#
```

Parameters

Returns

Return type

Returns:

Tuple[torch.nn.Parameter, torch.nn.Parameter]

Detailed Documentation

Documentation

Fuse convolutional module parameters and BatchNorm module parameters into new convolutional module parameters.

conv_w (torch.Tensor) – Convolutional weight.

conv_b (Optional[torch.Tensor]) – Convolutional bias.

bn_rm (torch.Tensor) – BatchNorm running mean.

bn_rv (torch.Tensor) – BatchNorm running variance.

bn_eps (float) – BatchNorm epsilon.

bn_w (Optional[torch.Tensor]) – BatchNorm weight.

bn_b (Optional[torch.Tensor]) – BatchNorm bias.

transpose (bool, optional) – If True, transpose the conv weight. Defaults to False.

Fused convolutional weight and bias.

Tuple[torch.nn.Parameter, torch.nn.Parameter]
