

torch.nn.utils.fusion.fuse_linear_bn_eval

https://pytorch.org/docs/stable/generated/torch.nn.utils.fusion.fuse_linear_bn_eval.html

Description:

Fuse a linear module and a BatchNorm module into a single, new linear module. `linear` (`torch.nn.Linear`) – A Linear module. `bn` (`torch.nn.modules.batchnorm._BatchNorm`) – A BatchNorm module. The fused linear module.

Function Signature

```
torch.nn.utils.fusion.fuse_linear_bn_eval(linear, bn)
[source]#
```

Parameters

Returns

Return type

Returns:

`torch.nn.Linear`

Notes & Warnings

NOTE Note Both linear and bn must be in eval mode, and bn must have its running buffers computed.

Detailed Documentation

Documentation

Fuse a linear module and a BatchNorm module into a single, new linear module.

linear (torch.nn.Linear) – A Linear module.

bn (torch.nn.modules.batchnorm._BatchNorm) – A BatchNorm module.

The fused linear module.

Both linear and bn must be in eval mode, and bn must have its running buffers computed.

Fuse a linear module and a BatchNorm module into a single, new linear module.

linear (torch.nn.Linear) – A Linear module.

linear (torch.nn.Linear) – A Linear module.

bn (torch.nn.modules.batchnorm._BatchNorm) – A BatchNorm module.

bn (torch.nn.modules.batchnorm._BatchNorm) – A BatchNorm module.

The fused linear module.

Both linear and bn must be in eval mode, and bn must have its running buffers computed.
