

torch.nn.utils.parametrize.is_parametrized

https://pytorch.org/docs/stable/generated/torch.nn.utils.parametrize.is_parametrized.html

Description:

Determine if a module has a parametrization. module (nn.Module) – module to query tensor_name (str, optional) – name of the parameter in the module Default: None True if module has a parametrization for the parameter named tensor_name, or if it has any parametrization when tensor_name is None; otherwise False

Function Signature

```
torch.nn.utils.parametrize.is_parametrized(module,  
tensor_name=None)[source]#
```

Parameters

Returns

Return type

Returns:

bool

Detailed Documentation

Documentation

Determine if a module has a parametrization.

module (nn.Module) – module to query

tensor_name (str, optional) – name of the parameter in the module Default: None

True if module has a parametrization for the parameter named tensor_name, or if it has any parametrization when tensor_name is None; otherwise False

Determine if a module has a parametrization.

module (nn.Module) – module to query

module (nn.Module) – module to query

tensor_name (str, optional) – name of the parameter in the module Default: None

tensor_name (str, optional) – name of the parameter in the module Default: None

True if module has a parametrization for the parameter named tensor_name, or if it has any parametrization when tensor_name is None; otherwise False
