

torch.nn.utils.prune.is_pruned#

https://pytorch.org/docs/stable/generated/torch.nn.utils.prune.is_pruned.html

Description:

Check if a module is pruned by looking for pruning pre-hooks. Check whether module is pruned by looking for forward_pre_hooks in its modules that inherit from the BasePruningMethod. module (nn.Module) – object that is either pruned or unpruned binary answer to whether module is pruned.

Function Signature

```
torch.nn.utils.prune.is_pruned(module)[source]#
```

Parameters

Returns

Returns:

binary answer to whether module is pruned.

Code Examples

```
>>> from torch.nn.utils import prune
>>> m = nn.Linear(5, 7)
>>> print(prune.is_pruned(m))
False
>>> prune.random_unstructured(m, name="weight", amount=0.2)
>>> print(prune.is_pruned(m))
True
```

Detailed Documentation

Documentation

Check if a module is pruned by looking for pruning pre-hooks.

Check whether module is pruned by looking for `forward_pre_hooks` in its modules that inherit from the `BasePruningMethod`.

module (`nn.Module`) – object that is either pruned or unpruned

binary answer to whether module is pruned.

Check if a module is pruned by looking for pruning pre-hooks.

Check whether module is pruned by looking for `forward_pre_hooks` in its modules that inherit from the `BasePruningMethod`.

module (`nn.Module`) – object that is either pruned or unpruned

binary answer to whether module is pruned.
