

torch.optim.Optimizer.register_state_dict_hook

https://pytorch.org/docs/stable/generated/torch.optim.Optimizer.register_state_dict_hook.html

Description:

Register a state dict pre-hook which will be called before `state_dict()` is called. It should have the following signature: The `optimizer` argument is the optimizer instance being used. The hook will be called with argument `self` before calling `state_dict` on `self`. The registered hook can be used to perform pre-processing before the `state_dict` call is made.

hook (Callable) – The user defined hook to be registered.

prepend (bool) – If True, the provided pre hook will be fired before all the already registered pre-hooks on `state_dict`. Otherwise, the provided hook will be fired after all the already registered pre-hooks. (default: False)

Function Signature

```
Optimizer.register_state_dict_pre_hook(hook, prepend=False)  
[source]#
```

Parameters

Returns

Return type

Returns:

torch.utils.hooks.RemoveableHandle

Code Examples

```
hook(optimizer) -> None
```

Detailed Documentation

Documentation

Register a state dict pre-hook which will be called before `state_dict()` is called.

It should have the following signature:

The optimizer argument is the optimizer instance being used. The hook will be called with argument `self` before calling `state_dict` on `self`. The registered hook can be used to perform pre-processing before the `state_dict` call is made.

hook (Callable) – The user defined hook to be registered.

prepend (bool) – If True, the provided pre hook will be fired before all the already registered pre-hooks on `state_dict`. Otherwise, the provided hook will be fired after all the already registered pre-hooks. (default: False)

a handle that can be used to remove the added hook by calling `handle.remove()`

`torch.utils.hooks.RemoveableHandle`
