

torch.optim.Optimizer.register_step_post

https://pytorch.org/docs/stable/generated/torch.optim.Optimizer.register_step_post_hook.html

Description:

Register an optimizer step post hook which will be called after optimizer step. It should have the following signature: The optimizer argument is the optimizer instance being used. hook (Callable) – The user defined hook to be registered. a handle that can be used to remove the added hook by calling handle.remove()

Function Signature

```
Optimizer.register_step_post_hook(hook)[source]#
```

Parameters

Returns

Return type

Returns:

torch.utils.hooks.RemovableHandle

Code Examples

```
hook(optimizer, args, kwargs) -> None
```

Detailed Documentation

Documentation

Register an optimizer step post hook which will be called after optimizer step.

It should have the following signature:

The optimizer argument is the optimizer instance being used.

hook (Callable) – The user defined hook to be registered.

a handle that can be used to remove the added hook by calling `handle.remove()`

`torch.utils.hooks.RemovableHandle`

Register an optimizer step post hook which will be called after optimizer step.

It should have the following signature:

The optimizer argument is the optimizer instance being used.

hook (Callable) – The user defined hook to be registered.

a handle that can be used to remove the added hook by calling `handle.remove()`

`torch.utils.hooks.RemovableHandle`
