

torch.optim.Optimizer.step#

<https://pytorch.org/docs/stable/generated/torch.optim.Optimizer.step.html>

Description:

Perform a single optimization step to update parameter. closure (Callable)

– A closure that reevaluates the model and returns the loss. Optional for most optimizers.

Function Signature

```
Optimizer.step(closure: None = None) → None[source]#
```

```
Optimizer.step(closure: Callable[[], float]) → float
```

Parameters

Detailed Documentation

Documentation

Perform a single optimization step to update parameter.

closure (Callable) – A closure that reevaluates the model and returns the loss. Optional for most optimizers.

Perform a single optimization step to update parameter.

closure (Callable) – A closure that reevaluates the model and returns the loss. Optional for most optimizers.
