

LRScheduler#

https://pytorch.org/docs/stable/generated/torch.optim.lr_scheduler.LRScheduler

Description:

Adjusts the learning rate during optimization. Return last computed learning rate by current scheduler. Compute learning rate using chainable form of the scheduler.

Function Signature

```
class torch.optim.lr_scheduler.LRScheduler(optimizer,  
last_epoch=-1)[source]#  
  
get_last_lr()[source]#  
  
Return type  
  
get_lr()[source]#  
  
Return type
```

Returns:

dict[str, Any]

Detailed Documentation

Documentation

Adjusts the learning rate during optimization.

Return last computed learning rate by current scheduler.

Compute learning rate using chainable form of the scheduler.

Load the scheduler's state.

`state_dict` (dict) – scheduler state. Should be an object returned from a call to `state_dict()`.

Return the state of the scheduler as a dict.

It contains an entry for every variable in `self.__dict__` which is not the optimizer.

Adjusts the learning rate during optimization.

Return last computed learning rate by current scheduler.

Compute learning rate using chainable form of the scheduler.

Load the scheduler's state.

`state_dict` (dict) – scheduler state. Should be an object returned from a call to `state_dict()`.
