

torch.Tensor.add#

<https://pytorch.org/docs/stable/generated/torch.Tensor.add.html>

Description:

Add a scalar or tensor to self tensor. If both alpha and other are specified, each element of other is scaled by alpha before being used. When other is a tensor, the shape of other must be broadcastable with the shape of the underlying tensor

Function Signature

```
Tensor.add(other, *, alpha=1) → Tensor#
```

Detailed Documentation

Documentation

Add a scalar or tensor to self tensor. If both alpha and other are specified, each element of other is scaled by alpha before being used.

When other is a tensor, the shape of other must be broadcastable with the shape of the underlying tensor

Add a scalar or tensor to self tensor. If both alpha and other are specified, each element of other is scaled by alpha before being used.

When other is a tensor, the shape of other must be broadcastable with the shape of the underlying tensor
