

torch.accelerator.memory.memory_alloc

https://pytorch.org/docs/stable/generated/torch.accelerator.memory.memory_al

Description:

Return the current accelerator device memory occupied by tensors in bytes for a given device index. `device_index` (`torch.device`, `str`, `int`, optional) – the index of the device to target. If not given, use `torch.accelerator.current_device_index()` by default. If a `torch.device` or `str` is provided, its type must match the current accelerator device type.

Function Signature

```
torch.accelerator.memory.memory_allocated(device_index=None,  
/)[source]#
```

Parameters

Return type

Returns:

`int`

Detailed Documentation

Documentation

Return the current accelerator device memory occupied by tensors in bytes for a given device index.

`device_index` (`torch.device`, `str`, `int`, optional) – the index of the device to target. If not given, use `torch.accelerator.current_device_index()` by default. If a `torch.device` or `str` is provided, its type must match the current accelerator device type.

Return the current accelerator device memory occupied by tensors in bytes for a given device index.

`device_index` (`torch.device`, `str`, `int`, optional) – the index of the device to target. If not given, use `torch.accelerator.current_device_index()` by default. If a `torch.device` or `str` is provided, its type must match the current accelerator device type.
