

torch.accelerator.set_device_index#

https://pytorch.org/docs/stable/generated/torch.accelerator.set_device_index

Description:

Set the current device index to a given device. device (torch.device, str, int) – a given device that must match the current accelerator device type. This function is a no-op if this device index is negative.

Function Signature

```
torch.accelerator.set_device_index(device, /)[source]#
```

Parameters

Notes & Warnings

NOTE

Note This function is a no-op if this device index is negative.

Detailed Documentation

Documentation

Set the current device index to a given device.

device (torch.device, str, int) – a given device that must match the current accelerator device type.

This function is a no-op if this device index is negative.

Set the current device index to a given device.

device (torch.device, str, int) – a given device that must match the current accelerator device type.

This function is a no-op if this device index is negative.
