

torch.accelerator.set_stream#

https://pytorch.org/docs/stable/generated/torch.accelerator.set_stream.html

Description:

Set the current stream to a given stream. stream (torch.Stream) – a given stream that must match the current accelerator device type. This function will set the current device index to the device index of the given stream.

Function Signature

```
torch.accelerator.set_stream(stream)[source]#
```

Parameters

Notes & Warnings

NOTE

Note This function will set the current device index to the device index of the given stream.

Detailed Documentation

Documentation

Set the current stream to a given stream.

stream (`torch.Stream`) – a given stream that must match the current accelerator device type.

This function will set the current device index to the device index of the given stream.

Set the current stream to a given stream.

stream (`torch.Stream`) – a given stream that must match the current accelerator device type.

This function will set the current device index to the device index of the given stream.
