

torch.add#

<https://pytorch.org/docs/stable/generated/torch.add.html>

Description:

Adds other, scaled by alpha, to input. Supports broadcasting to a common shape, type promotion, and integer, float, and complex inputs.

input (Tensor) – the input tensor. other (Tensor or Number) – the tensor or number to add to input. alpha (Number) – the multiplier for other.

Function Signature

```
torch.add(input, other, *, alpha=1, out=None) → Tensor#
```

Parameters

Keyword Arguments

Parameters

Keyword

alpha (Number) – the multiplier for other. out (Tensor, optional) – the output tensor.

Code Examples

```
>>> a = torch.randn(4)
>>> a
tensor([ 0.0202,  1.0985,  1.3506, -0.6056])
>>> torch.add(a, 20)
tensor([ 20.0202,  21.0985,  21.3506,  19.3944])

>>> b = torch.randn(4)
>>> b
tensor([-0.9732, -0.3497,  0.6245,  0.4022])
>>> c = torch.randn(4, 1)
>>> c
tensor([[ 0.3743],
        [-1.7724],
        [-0.5811],
        [-0.8017]])
>>> torch.add(b, c, alpha=10)
tensor([[ 2.7695,  3.3930,  4.3672,  4.1450],
        [-18.6971, -18.0736, -17.0994, -17.3216],
        [-6.7845, -6.1610, -5.1868, -5.4090],
        [-8.9902, -8.3667, -7.3925, -7.6147]])
```

Detailed Documentation

Documentation

Adds other, scaled by alpha, to input.

Supports broadcasting to a common shape, type promotion, and integer, float, and complex inputs.

input (Tensor) – the input tensor.

other (Tensor or Number) – the tensor or number to add to input.

alpha (Number) – the multiplier for other.

out (Tensor, optional) – the output tensor.

Adds other, scaled by alpha, to input.

Supports broadcasting to a common shape, type promotion, and integer, float, and complex inputs.

input (Tensor) – the input tensor.

input (Tensor) – the input tensor.
