

LinearReLU#

[https://pytorch.org/docs/stable/generated/torch.nn.intrinsic.qat.LinearReLU](https://pytorch.org/docs/stable/generated/torch.nn.intrinsic.qat.LinearReLU.html)

Description:

A LinearReLU module fused from Linear and ReLU modules, attached with FakeQuantize modules for weight, used in quantization aware training. We adopt the same interface as `torch.nn.Linear`. Similar to `torch.nn.intrinsic.LinearReLU`, with FakeQuantize modules initialized to default. `weight` (`torch.Tensor`) – fake quant module for weight

Function Signature

```
class torch.nn.intrinsic.qat.LinearReLU(in_features,  
out_features, bias=True, qconfig=None)[source]#
```

Variables

Code Examples

```
>>> m = nn.qat.LinearReLU(20, 30)
>>> input = torch.randn(128, 20)
>>> output = m(input)
>>> print(output.size())
torch.Size([128, 30])
```

Detailed Documentation

Documentation

A `LinearReLU` module fused from `Linear` and `ReLU` modules, attached with `FakeQuantize` modules for weight, used in quantization aware training.

We adopt the same interface as `torch.nn.Linear`.

Similar to `torch.ao.nn.intrinsic.LinearReLU`, with `FakeQuantize` modules initialized to default.

weight (`torch.Tensor`) – fake quant module for weight

A `LinearReLU` module fused from `Linear` and `ReLU` modules, attached with `FakeQuantize` modules for weight, used in quantization aware training.

We adopt the same interface as `torch.nn.Linear`.

Similar to `torch.ao.nn.intrinsic.LinearReLU`, with `FakeQuantize` modules initialized to default.

weight (`torch.Tensor`) – fake quant module for weight
