

LinearReLU#

<https://pytorch.org/docs/stable/generated/torch.nn.intrinsic.quantized.dynamic.LinearReLU.html>

Description:

A LinearReLU module fused from Linear and ReLU modules that can be used for dynamic quantization. Supports both, FP16 and INT8 quantization. We adopt the same interface as `torch.nn.quantized.dynamic.Linear`.

`torch.nn.quantized.dynamic.Linear` (Same as) –

Function Signature

```
class  
torch.nn.intrinsic.quantized.dynamic.LinearReLU(in_features,  
out_features, bias=True, dtype=torch.qint8)[source]#
```

Variables

Code Examples

```
>>> m = nn.intrinsic.quantized.dynamic.LinearReLU(20, 30)
>>> input = torch.randn(128, 20)
>>> output = m(input)
>>> print(output.size())
torch.Size([128, 30])
```

Detailed Documentation

Documentation

A LinearReLU module fused from Linear and ReLU modules that can be used for dynamic quantization. Supports both, FP16 and INT8 quantization.

We adopt the same interface as `torch.ao.nn.quantized.dynamic.Linear`.

`torch.ao.nn.quantized.dynamic.Linear` (Same as) –
