

Linear#

<https://pytorch.org/docs/stable/generated/torch.nn.qat.Linear.html>

Description:

A linear module attached with FakeQuantize modules for weight, used for quantization aware training. We adopt the same interface as `torch.nn.Linear`, please see <https://pytorch.org/docs/stable/nn.html#torch.nn.Linear> for documentation. Similar to `torch.nn.Linear`, with FakeQuantize modules initialized to default. weight (`torch.Tensor`) – fake quant module for weight

Create a qat module from a float module or `qparams_dict` Args: `mod` a float module, either produced by `torch.ao.quantization` utilities or directly from user

Function Signature

```
class torch.ao.nn.qat.Linear(in_features, out_features,
                             bias=True, qconfig=None, device=None, dtype=None)[source]#
```

Variables

```
classmethod from_float(mod,
                       use_precomputed_fake_quant=False)[source]#
```

Detailed Documentation

Documentation

A linear module attached with FakeQuantize modules for weight, used for quantization aware training.

We adopt the same interface as `torch.nn.Linear`, please see <https://pytorch.org/docs/stable/nn.html#torch.nn.Linear> for documentation.

Similar to `torch.nn.Linear`, with FakeQuantize modules initialized to default.

weight (`torch.Tensor`) – fake quant module for weight

Create a qat module from a float module or `qparams_dict` Args: mod a float module, either produced by `torch.ao.quantization` utilities or directly from user
