

FloatFunctional#

<https://pytorch.org/docs/stable/generated/torch.nn.quantized.FloatFunctional>

Description:

State collector class for float operations. The instance of this class can be used instead of the `torch.` prefix for some operations. See example usage below. This class does not provide a forward hook. Instead, you must use one of the underlying functions (e.g. `add`).

Function Signature

```
class torch.nn.quantized.FloatFunctional[source]#
```

Valid operation names:

Code Examples

```
>>> f_add = FloatFunctional()
>>> a = torch.tensor(3.0)
>>> b = torch.tensor(4.0)
>>> f_add.add(a, b) # Equivalent to ``torch.add(a, b)``
```

Notes & Warnings

NOTE This class does not provide a forward hook. Instead, you must use one of the underlying functions (e.g. `add`).

Detailed Documentation

Documentation

State collector class for float operations.

The instance of this class can be used instead of the torch. prefix for some operations. See example usage below.

This class does not provide a forward hook. Instead, you must use one of the underlying functions (e.g. add).
