

adaptive_avg_pool2d#

https://pytorch.org/docs/stable/generated/torch.nn.quantized.functional.adaptive_avg_pool2d.html

Description:

Applies a 2D adaptive average pooling over a quantized input signal composed of several quantized input planes. The input quantization parameters propagate to the output. See AdaptiveAvgPool2d for details and output shape. `output_size` (None) – the target output size (single integer or double-integer tuple)

Function Signature

```
class  
torch.nn.quantized.functional.adaptive_avg_pool2d(input,  
output_size)[source]#
```

Parameters

Return type

Returns:

Tensor

Notes & Warnings

NOTE

Note The input quantization parameters propagate to the output.

Detailed Documentation

Documentation

Applies a 2D adaptive average pooling over a quantized input signal composed of several quantized input planes.

The input quantization parameters propagate to the output.

See AdaptiveAvgPool2d for details and output shape.

output_size (None) – the target output size (single integer or double-integer tuple)

Applies a 2D adaptive average pooling over a quantized input signal composed of several quantized input planes.

The input quantization parameters propagate to the output.

See AdaptiveAvgPool2d for details and output shape.

output_size (None) – the target output size (single integer or double-integer tuple)
