

DeQuantStub#

[https://pytorch.org/docs/stable/generated/torch.ao.quantization.DeQuantStub.](https://pytorch.org/docs/stable/generated/torch.ao.quantization.DeQuantStub.html)

Description:

Dequantize stub module, before calibration, this is same as identity, this will be swapped as nnq.DeQuantize in convert. qconfig (Optional[Any]) – quantization configuration for the tensor, if qconfig is not provided, we will get qconfig from parent modules

Function Signature

```
class torch.ao.quantization.DeQuantStub(qconfig=None)  
[source]#
```

Parameters

Detailed Documentation

Documentation

Dequantize stub module, before calibration, this is same as identity, this will be swapped as nnq.DeQuantize in convert.

qconfig (Optional[Any]) – quantization configuration for the tensor, if qconfig is not provided, we will get qconfig from parent modules

Dequantize stub module, before calibration, this is same as identity, this will be swapped as nnq.DeQuantize in convert.

qconfig (Optional[Any]) – quantization configuration for the tensor, if qconfig is not provided, we will get qconfig from parent modules
