

QuantStub#

<https://pytorch.org/docs/stable/generated/torch.ao.quantization.QuantStub.html>

Description:

Quantize stub module, before calibration, this is same as an observer, it will be swapped as nnq.Quantize in convert. qconfig (Optional[QConfig]) – quantization configuration for the tensor, if qconfig is not provided, we will get qconfig from parent modules

Function Signature

```
class torch.ao.quantization.QuantStub(qconfig=None)[source]#
```

Parameters

Detailed Documentation

Documentation

Quantize stub module, before calibration, this is same as an observer, it will be swapped as nnq.Quantize in convert.

qconfig (Optional[QConfig]) – quantization configuration for the tensor, if qconfig is not provided, we will get qconfig from parent modules

Quantize stub module, before calibration, this is same as an observer, it will be swapped as nnq.Quantize in convert.

qconfig (Optional[QConfig]) – quantization configuration for the tensor, if qconfig is not provided, we will get qconfig from parent modules
