

compare_results#

https://pytorch.org/docs/stable/generated/torch.ao.quantization.compare_results.html

Description:

Given two dict mapping from debug_handle_id (int) to list of tensors return a map from debug_handle_id to NodeAccuracySummary that contains comparison information like SQNR, MSE etc. ref_results (Dict[int, Tuple[str, object, List[torch.Tensor]]]) – reference results for each debug_handle_id actual_results (Dict[int, Tuple[str, object, List[torch.Tensor]]]) – actual results for each debug_handle_id Dict[int, NodeAccuracySummary] dict[int, torch.ao.quantization.pt2e._numeric_debugger.NodeAccuracySummary]

Function Signature

```
class torch.ao.quantization.compare_results(ref_results, actual_results)[source]#
```

Parameters

Returns

Return type

Returns:

`dict[int, torch.ao.quantization.pt2e._numeric_debugger.NodeAccuracySummary]`

Detailed Documentation

Documentation

Given two dict mapping from `debug_handle_id` (int) to list of tensors return a map from `debug_handle_id` to `NodeAccuracySummary` that contains comparison information like SQNR, MSE etc.

`ref_results` (`Dict[int, Tuple[str, object, List[torch.Tensor]]]`) – reference results for each `debug_handle_id`

`actual_results` (`Dict[int, Tuple[str, object, List[torch.Tensor]]]`) – actual results for each `debug_handle_id`

`Dict[int, NodeAccuracySummary]`

`dict[int, torch.ao.quantization.pt2e._numeric_debugger.NodeAccuracySummary]`
