

FakeQuantizeBase#

https://pytorch.org/docs/stable/generated/torch.ao.quantization.fake_quantize

Description:

Base fake quantize module. Base fake quantize module Any fake quantize implementation should derive from this class. Concrete fake quantize module should follow the same API. In forward, they will update the statistics of the observed Tensor and fake quantize the input. They should also provide a `calculate_qparams` function that computes the quantization parameters given the collected statistics.

Function Signature

```
class
torch.ao.quantization.fake_quantize.FakeQuantizeBase[source]
#
```

Detailed Documentation

Documentation

Base fake quantize module.

Base fake quantize module Any fake quantize implementation should derive from this class.

Concrete fake quantize module should follow the same API. In forward, they will update the statistics of the observed Tensor and fake quantize the input. They should also provide a `calculate_qparams` function that computes the quantization parameters given the collected statistics.

Base fake quantize module.

Base fake quantize module Any fake quantize implementation should derive from this class.

Concrete fake quantize module should follow the same API. In forward, they will update the statistics of the observed Tensor and fake quantize the input. They should also provide a `calculate_qparams` function that computes the quantization parameters given the collected statistics.
