

FixedQParamsFakeQuantize#

https://pytorch.org/docs/stable/generated/torch.ao.quantization.fake_quantize

Description:

Simulate quantize and dequantize in training time. Simulate quantize and dequantize with fixed quantization parameters in training time. Only per tensor quantization is supported. Define a string representation of the object's attributes.

Function Signature

```
class  
torch.ao.quantization.fake_quantize.FixedQParamsFakeQuantize  
(observer)[source]#  
extra_repr()[source]#
```

Detailed Documentation

Documentation

Simulate quantize and dequantize in training time.

Simulate quantize and dequantize with fixed quantization parameters in training time.
Only per tensor quantization is supported.

Define a string representation of the object's attributes.

Simulate quantize and dequantize in training time.

Simulate quantize and dequantize with fixed quantization parameters in training time.
Only per tensor quantization is supported.

Define a string representation of the object's attributes.
