

RecordingObserver#

[https://pytorch.org/docs/stable/generated/torch.quantization.observer.Rec](https://pytorch.org/docs/stable/generated/torch.quantization.observer.RecordingObserver.html)

Description:

The module is mainly for debug and records the tensor values during runtime. dtype – Quantized data type qscheme – Quantization scheme to be used reduce_range – Reduces the range of the quantized data type by 1 bit

Function Signature

```
class  
torch.quantization.observer.RecordingObserver(dtype=torch  
.qint8)[source]#
```

Parameters

Detailed Documentation

Documentation

The module is mainly for debug and records the tensor values during runtime.

`dtype` – Quantized data type

`qscheme` – Quantization scheme to be used

`reduce_range` – Reduces the range of the quantized data type by 1 bit

The module is mainly for debug and records the tensor values during runtime.

`dtype` – Quantized data type

`dtype` – Quantized data type
