

quantize_qat#

https://pytorch.org/docs/stable/generated/torch.ao.quantization.quantize_qat

Description:

Do quantization aware training and output a quantized model `run_fn` – a function for evaluating the prepared model, can be a function that simply runs the prepared model or a training loop `run_args` – positional arguments for `run_fn`

Function Signature

```
class torch.ao.quantization.quantize_qat(model, run_fn,  
run_args, inplace=False)[source]#
```

Parameters

Returns

Returns:

Quantized model.

Detailed Documentation

Documentation

Do quantization aware training and output a quantized model

`run_fn` – a function for evaluating the prepared model, can be a function that simply runs the prepared model or a training loop

`run_args` – positional arguments for `run_fn`

Do quantization aware training and output a quantized model
