

swap_module#

[https://pytorch.org/docs/stable/generated/torch.ao.quantization.swap_module.](https://pytorch.org/docs/stable/generated/torch.ao.quantization.swap_module.html)

Description:

Swaps the module if it has a quantized counterpart and it has an observer attached. mapping – a dictionary that maps from nn module to nnq module The corresponding quantized module of mod

Function Signature

```
class torch.ao.quantization.swap_module(mod, mapping,
custom_module_class_mapping,
use_precomputed_fake_quant=False)[source]#
```

Parameters

Returns

Returns:

The corresponding quantized module of mod

Detailed Documentation

Documentation

Swaps the module if it has a quantized counterpart and it has an observer attached.

mapping – a dictionary that maps from nn module to nnq module

The corresponding quantized module of mod

Swaps the module if it has a quantized counterpart and it has an observer attached.

mapping – a dictionary that maps from nn module to nnq module

mapping – a dictionary that maps from nn module to nnq module

The corresponding quantized module of mod
