

torch.bitwise_left_shift#

https://pytorch.org/docs/stable/generated/torch.bitwise_left_shift.html#torch

Description:

Computes the left arithmetic shift of input by other bits. The input tensor must be of integral type. This operator supports broadcasting to a common shape and type promotion. The operation applied is: input (Tensor or Scalar) – the first input tensor other (Tensor or Scalar) – the second input tensor out (Tensor, optional) – the output tensor.

Function Signature

```
torch.bitwise_left_shift(input, other, *, out=None) → Tensor#
```

Parameters

Keyword Arguments

Parameters

Keyword

out (Tensor, optional) – the output tensor.

Code Examples

```
>>> torch.bitwise_left_shift(torch.tensor([-1, -2, 3],  
dtype=torch.int8), torch.tensor([1, 0, 3], dtype=torch.int8))  
tensor([-2, -2, 24], dtype=torch.int8)
```

Detailed Documentation

Documentation

Computes the left arithmetic shift of input by other bits. The input tensor must be of integral type. This operator supports broadcasting to a common shape and type promotion.

The operation applied is:

input (Tensor or Scalar) – the first input tensor

other (Tensor or Scalar) – the second input tensor

out (Tensor, optional) – the output tensor.

Computes the left arithmetic shift of input by other bits. The input tensor must be of integral type. This operator supports broadcasting to a common shape and type promotion.

The operation applied is:

input (Tensor or Scalar) – the first input tensor

input (Tensor or Scalar) – the first input tensor

other (Tensor or Scalar) – the second input tensor

other (Tensor or Scalar) – the second input tensor

out (Tensor, optional) – the output tensor.
