

torch.broadcast_to#

https://pytorch.org/docs/stable/generated/torch.broadcast_to.html

Description:

Broadcasts `input` to the shape `shape`. Equivalent to calling `input.expand(shape)`. See `expand()` for details. `input` (Tensor) – the input tensor. `shape` (list, tuple, or `torch.Size`) – the new shape.

Function Signature

```
torch.broadcast_to(input, shape) → Tensor#
```

Parameters

Code Examples

```
>>> x = torch.tensor([1, 2, 3])
>>> torch.broadcast_to(x, (3, 3))
tensor([[1, 2, 3],
        [1, 2, 3],
        [1, 2, 3]])
```

Detailed Documentation

Documentation

Broadcasts input to the shape `shape`. Equivalent to calling `input.expand(shape)`. See `expand()` for details.

`input (Tensor)` – the input tensor.

`shape (list, tuple, or torch.Size)` – the new shape.

Broadcasts input to the shape `shape`. Equivalent to calling `input.expand(shape)`. See `expand()` for details.

`input (Tensor)` – the input tensor.

`input (Tensor)` – the input tensor.

`shape (list, tuple, or torch.Size)` – the new shape.
