

torch.compiler.disable#

<https://pytorch.org/docs/stable/generated/torch.compiler.disable.html>

Description:

This function provides a decorator to disable compilation on a function. It also provides the option of recursively disabling called functions. `fn` (optional) – The function to disable recursive (optional) – A boolean value indicating whether the disabling should be recursive. `reason` (optional) – A string value indicating the reason for disabling the function.

Function Signature

```
torch.compiler.disable(fn=None, recursive=True, *,  
reason=None)[source]#
```

Parameters

Detailed Documentation

Documentation

This function provides a decorator to disable compilation on a function. It also provides the option of recursively disabling called functions.

`fn` (optional) – The function to disable

`recursive` (optional) – A boolean value indicating whether the disabling should be recursive.

`reason` (optional) – A string value indicating the reason for disabling the function.

This function provides a decorator to disable compilation on a function. It also provides the option of recursively disabling called functions.
