

torch.compiler.keep_tensor_guards_unsafe

https://pytorch.org/docs/stable/generated/torch.compiler.keep_tensor_guards_unsafe.html

Description:

A common function to keep tensor guards on all tensors. This is unsafe to use by default. But if you don't expect any changes in the model code, you can just keep the tensor guards. >> opt_mod = torch.compile(>> mod, >> options={"guard_filter_fn": torch.compiler.keep_tensor_guards}, >>)

Function Signature

```
torch.compiler.keep_tensor_guards_unsafe(guard_entries,  
keep_parameters=False)[source]#
```

Detailed Documentation

Documentation

A common function to keep tensor guards on all tensors. This is unsafe to use by default. But if you don't expect any changes in the model code, you can just keep the tensor guards.

```
>> opt_mod = torch.compile( >> mod, >> options={"guard_filter_fn":  
torch.compiler.keep_tensor_guards}, >> )
```

A common function to keep tensor guards on all tensors. This is unsafe to use by default. But if you don't expect any changes in the model code, you can just keep the tensor guards.

```
>> opt_mod = torch.compile( >> mod, >> options={"guard_filter_fn":  
torch.compiler.keep_tensor_guards}, >> )
```
