

# torch.compiler.skip\_guard\_on\_all\_nn\_modules\_unsafe

[https://pytorch.org/docs/stable/generated/torch.compiler.skip\\_guard\\_on\\_all\\_nn\\_modules\\_unsafe.html](https://pytorch.org/docs/stable/generated/torch.compiler.skip_guard_on_all_nn_modules_unsafe.html)

## Description:

A common function to skip guards on all nn modules, both user defined as well inbuilt nn modules (like torch.nn.Linear). This is unsafe to use by default. But for majority of torch.compile users, the model code does not modify the nn module attributes. They can benefit from reduction in guard latency overhead using this API. To use this API, use guard\_filter\_fn argument while calling torch.compile >> opt\_mod = torch.compile(mod, options={"guard\_filter\_fn": torch.compiler.skip\_guard\_on\_all\_nn\_modules\_unsafe}, >> )

## Function Signature

---

```
torch.compiler.skip_guard_on_all_nn_modules_unsafe(guard_entries)[source]
```

# Detailed Documentation

## Documentation

A common function to skip guards on all nn modules, both user defined as well inbuilt nn modules (like torch.nn.Linear). This is unsafe to use by default. But for majority of torch.compile users, the model code does not modify the nn module attributes. They can benefit from reduction in guard latency overhead using this API.

To use this API, use guard\_filter\_fn argument while calling torch.compile

```
>> opt_mod = torch.compile( >> mod, >> options={"guard_filter_fn":  
torch.compiler.skip_guard_on_all_nn_modules_unsafe}, >> )
```
