

torch.compiler.skip_guard_on_inbuilt_nn

https://pytorch.org/docs/stable/generated/torch.compiler.skip_guard_on_inbuilt_nn_modules_unsafe.html

Description:

A common function to skip guards on the inbuilt nn modules like `torch.nn.Linear`. This is unsafe to use by default. But for majority of `torch.compile` users, the model code does not modify the inbuilt nn module attributes. They can benefit from reduction in guard latency overhead using this API. To use this API, use `guard_filter_fn` argument while calling `torch.compile` >> `opt_mod = torch.compile( >> mod, >> options={"guard_filter_fn": torch.compiler.skip_guard_on_all_nn_modules_unsafe}, >> )`

Function Signature

```
torch.compiler.skip_guard_on_inbuilt_nn_modules_unsafe(guard_entries)[source]#
```

Detailed Documentation

Documentation

A common function to skip guards on the inbuilt nn modules like `torch.nn.Linear`. This is unsafe to use by default. But for majority of `torch.compile` users, the model code does not modify the inbuilt nn module attributes. They can benefit from reduction in guard latency overhead using this API.

To use this API, use `guard_filter_fn` argument while calling `torch.compile`

```
>> opt_mod = torch.compile( >> mod, >> options={"guard_filter_fn":  
torch.compiler.skip_guard_on_all_nn_modules_unsafe}, >> )
```
