

torch.dot#

<https://pytorch.org/docs/stable/generated/torch.dot.html>

Description:

Computes the dot product of two 1D tensors. Unlike NumPy's `dot`, `torch.dot` intentionally only supports computing the dot product of two 1D tensors with the same number of elements. `input (Tensor)` – first tensor in the dot product, must be 1D. `tensor (Tensor)` – second tensor in the dot product, must be 1D.

Function Signature

```
torch.dot(input, tensor, *, out=None) → Tensor#
```

Parameters

Keyword Arguments

Parameters

Keyword

out (Tensor, optional) – the output tensor.

Code Examples

```
>>> torch.dot(torch.tensor([2, 3]), torch.tensor([2, 1]))
tensor(7)

>>> t1, t2 = torch.tensor([0, 1]), torch.tensor([2, 3])
>>> torch.dot(t1, t2)
tensor(3)
```

Notes & Warnings

NOTE Unlike NumPy's dot, torch.dot intentionally only supports computing the dot product of two 1D tensors with the same number of elements.

Detailed Documentation

Documentation

Computes the dot product of two 1D tensors.

Unlike NumPy's dot, torch.dot intentionally only supports computing the dot product of two 1D tensors with the same number of elements.

input (Tensor) – first tensor in the dot product, must be 1D.

tensor (Tensor) – second tensor in the dot product, must be 1D.

out (Tensor, optional) – the output tensor.

Computes the dot product of two 1D tensors.

Unlike NumPy's dot, torch.dot intentionally only supports computing the dot product of two 1D tensors with the same number of elements.

input (Tensor) – first tensor in the dot product, must be 1D.

input (Tensor) – first tensor in the dot product, must be 1D.
