

torch.func.debug_unwrap#

https://pytorch.org/docs/stable/generated/torch.func.debug_unwrap.html

Description:

Unwraps a functorch tensor (e.g. BatchedTensor, GradTrackingTensor) to its underlying tensor. This function should only be used in a debug setting (e.g. trying to print the value of a Tensor in a debugger). Otherwise, using the result of function inside of a function being transformed will lead to undefined behavior.

Function Signature

```
torch.func.debug_unwrap(tensor, *, recurse=True)[source]#
```

Return type

Returns:

Tensor

Detailed Documentation

Documentation

Unwraps a functorch tensor (e.g. BatchedTensor, GradTrackingTensor) to its underlying tensor.

This function should only be used in a debug setting (e.g. trying to print the value of a Tensor in a debugger). Otherwise, using the result of function inside of a function being transformed will lead to undefined behavior.

Unwraps a functorch tensor (e.g. BatchedTensor, GradTrackingTensor) to its underlying tensor.

This function should only be used in a debug setting (e.g. trying to print the value of a Tensor in a debugger). Otherwise, using the result of function inside of a function being transformed will lead to undefined behavior.
