

torch.fx.experimental.proxy_tensor.maybe_disable_thunkify

https://pytorch.org/docs/stable/generated/torch.fx.experimental.proxy_tensor.maybe_disable_thunkify.html

Description:

Within a context, disable thunkification. See `maybe_enable_thunkify()` for more details. This is helpful if you have a wrapper function which you want to enable thunkification on, but in some segment on the inside (say, the original user function), you want to disable thunkification as you know it is not needed there. `Generator[None, None, None]`

Function Signature

```
torch.fx.experimental.proxy_tensor.maybe_disable_thunkify()  
[source]#
```

Return type

Returns:

`Generator[None, None, None]`

Detailed Documentation

Documentation

Within a context, disable thunkification. See `maybe_enable_thunkify()` for more details. This is helpful if you have a wrapper function which you want to enable thunkification on, but in some segment on the inside (say, the original user function), you want to disable thunkification as you know it is not needed there.

Generator[None, None, None]

Within a context, disable thunkification. See `maybe_enable_thunkify()` for more details. This is helpful if you have a wrapper function which you want to enable thunkification on, but in some segment on the inside (say, the original user function), you want to disable thunkification as you know it is not needed there.

Generator[None, None, None]
