

Specialization#

[https://pytorch.org/docs/stable/generated/torch.fx.experimental.symbolic_shapes](https://pytorch.org/docs/stable/generated/torch.fx.experimental.symbolic_shapes.Specialization.html)

Description:

This class is used in multi-graph compilation contexts where we generate multiple specialized graphs and dispatch to the appropriate one at runtime. This allows us to optimize the trade-off between performance and generality by creating specialized versions for common patterns (e.g., $x.shape[0] \% 16 == 0$) while maintaining a general fallback.

Function Signature

```
class  
torch.fx.experimental.symbolic_shapes.Specialization(source,  
check_fn)[source]#
```

Detailed Documentation

Documentation

This class is used in multi-graph compilation contexts where we generate multiple specialized graphs and dispatch to the appropriate one at runtime. This allows us to optimize the trade-off between performance and generality by creating specialized versions for common patterns (e.g., `x.shape[0] % 16 == 0`) while maintaining a general fallback.
