

SubclassSymbolicContext#

https://pytorch.org/docs/stable/generated/torch.fx.experimental.symbolic_shapes.SubclassSymbolicContext.html

Description:

The correct symbolic context for a given inner tensor of a traceable tensor subclass may differ from that of the outer symbolic context. This structure allows for this flexibility, with inner symbolic contexts mapped via attr -> symbolic context.

Function Signature

```
class
torch.fx.experimental.symbolic_shapes.SubclassSymbolicContext(
    dynamic_sizes, dynamic_strides=None,
    constraint_sizes=None, constraint_strides=None,
    specialize_on=None, view_base_context=None,
    tensor_source=None,
    shape_env_to_source_to_symbol_cache=None,
    inner_contexts=None)[source]#
```

Detailed Documentation

Documentation

The correct symbolic context for a given inner tensor of a traceable tensor subclass may differ from that of the outer symbolic context. This structure allows for this flexibility, with inner symbolic contexts mapped via attr -> symbolic context.

The correct symbolic context for a given inner tensor of a traceable tensor subclass may differ from that of the outer symbolic context. This structure allows for this flexibility, with inner symbolic contexts mapped via attr -> symbolic context.
