

SymbolicContext#

https://pytorch.org/docs/stable/generated/torch.fx.experimental.symbolic_shapes.SymbolicContext.html

Description:

Data structure specifying how we should create symbols in `create_symbolic_sizes_strides_storage_offset`; e.g., should they be static or dynamic. This is an abstract base class because we are probably going to add another version of this that says “use exactly these `SymInts`, don’t allocate fresh symbols.”

Function Signature

```
class  
torch.fx.experimental.symbolic_shapes.SymbolicContext[source  
]#
```

Detailed Documentation

Documentation

Data structure specifying how we should create symbols in `create_symbolic_sizes_strides_storage_offset`; e.g., should they be static or dynamic.

This is an abstract base class because we are probably going to add another version of this that says “use exactly these `SymInts`, don’t allocate fresh symbols.”

Data structure specifying how we should create symbols in `create_symbolic_sizes_strides_storage_offset`; e.g., should they be static or dynamic.

This is an abstract base class because we are probably going to add another version of this that says “use exactly these `SymInts`, don’t allocate fresh symbols.”
